

SIGNS & SYMPTOMS OF CHILDHOOD CANCER

Continued & unexplained weight loss

Headaches - often with vomiting
in the early night or morning

Increased swelling or pain
in bones, joints, back or legs

Lump or mass in the abdomen,
neck, chest, pelvis or armpits

Development of exercise
bruising, bleeding or rash

Constant infections

Whitish colour behind the pupils

Nausea which persists or
vomiting without nausea

Constant tiredness or
noticeable paleness

Eye or vision changes which
occur suddenly or persist

Recurrent or persistent
fevers of unknown origin

If your child has any of these symptoms or you are worried about your child, please seek medical advice.

WORLD CANCER DAY 4TH FEBRUARY 2021

**Did you know that in some countries only 20%
children diagnosed with cancer will survive.**

This is partly because a lack of awareness of childhood cancer can lead to late diagnosis and the need for more toxic treatments. By raising awareness of the signs & symptoms of childhood cancer you can help to improve early diagnosis.
